

3M™ Scotchmate™

3M™ Scotchmate™ Hook-and-Loop Fasteners

3M Scotchmate Fasteners described here consist of two woven strips, one of which is covered with tiny, stiff hooks and the other with pliable loops. Pressed together they fasten; to open, simply pull apart.

Standard Sew-On - Sew-on woven components are durable adjustable as well as completely washable. SJ3418 Loop and SJ3419 Hook.

Pressure-Sensitive - SJ 3526 Hook and SJ3527 Loop, SJ3571 Loop and SJ3572 Hook

This adhesive-backed product is designed for dynamic and static load applications on smooth, clean, and dry surfaces. It offers a high-adhesive bond to a wide variety of materials and are recommended for most pressure-sensitive applications. They also offer superior moisture resistance.

The SJ3526 and SJ3527 when used for static load applications temperature should not exceed 49°C. Rubber Adhesive.

The SJ 3571 and SJ3572 is designed for static load applications where temperatures may reach 93° C. Acrylic Adhesive.

3M™ Scotchmate™ Hook-and-Loop Fasteners Mini Packs

The 3M Scotchmate Hook-and-Loop Reclosable Fastening System offers advanced closure alternatives to zippers, screws, snaps, hooks, bolts and more. They're often better than conventional closure methods because they offer greater design flexibility, faster product assembly, smoother and cleaner exterior surfaces and improved product performance.

The new Mini Packs are great for design development and small-volume production requirements. Now you can inexpensively test and evaluate 3M's most popular reclosable fastening systems before making a more substantial investment. Mini Packs also simplify storage and dispensing.

Available in Mini Packs are adhesive-backed fasteners which allow for faster, easier attachment.

Description: General purpose, pressure sensitive, Rubber adhesive / Bonds to most surfaces, 49°C continuous, 70°C intermittent

3M™ Dual Lock™

3M™ Dual Lock™ Reclosable Fasteners

3M Dual Lock Fasteners described here consist of two types of continuous plastic strips (Type 170, 250 or 400) with mushroom shaped stems. They are designed to engage together one with another to provide reclosable fastening for a wide range of applications.

- **3M Dual Lock 400** has a dense stem pattern of approximately 62 stems/cm². Mating this product with Dual Lock Type 170 provides the most universal fastener combination in the Dual Lock System. It locks together in any position and is generally the best choice for joining two surfaces when using the Pressure-Sensitive Dual Lock products.
- **3M Dual Lock 250** has approximately 38 stems/cm². It is a self-engaging fastener (Type 250 to Type 250) providing similar strength to a Type 400 to Type 170 combination. It also reduces inventory as only 1 roll is needed.
- **3M Dual Lock 170** has approximately 26 stems/cm². Besides general use with Dual Lock Type 400, it can also be mated with Scotchmate Loop products to provide an exceptional high strength fastener with a limited reclosure life.
- **SJ-3540 Type 250, SJ-3541 Type 400 and SJ-3542 Type 170.** Designed for general purpose kinds of dynamic and static load applications where temperatures do not exceed 49°C. When applied under normal conditions, high adhesive bonds can be achieved to a wide variety of clean, dry surfaces including difficult surfaces like polyethylene and polypropylene.
- **SJ-3550 Type 250, SJ-3551 Type 400 and SJ-3552 Type 170.** High adhesive bonds can be achieved to a variety of surfaces, including paint, metal, and most plastics (except polyethylene or polypropylene). Special performance characteristics include:
 - Good temperature and humidity cycling from -29° C to +93°C and 0% to 100% relative humidity.
 - Good low and high temperature impact resistance at -6° C to 70° C.
- **SJ-3560 Clear Type 250.** Same as SJ-3550 but totally clear and backed by a 3M™ VHB™ Clear Tape.
