# 3M™ Trizact™ Abrasives: The First Abrasive P

## Consistent Finish

Because each pyramid is identically sized, the tops of the pyramids wear away at the same rate, continually exposing fresh abrasive. This even wear assures you of a uniform scratch pattern on the panel's surface, where other traditional methods often can leave behind deep, wild scratches. 3M Trizact abrasives are engineered to deliver consistent, reproducible results time after time.

## Fast Results

Every body shop wants to save time. And 3M Trizact Hookit II Blending Discs get the job done faster than traditional methods. Plus, 3M Trizact abrasives leave a better quality finish, ensuring that the new base color will properly adhere, and leaving a uniform finish for metallics in the base coat to lay down properly. 3M Trizact abrasives also ensure a consistent pattern that promotes complete clear-coat adhesion.

## Easy Clean-up

With 3M Trizact abrasives, technicians use the cleaner damp-sanding process rather than traditional wet sanding, eliminating the need for messy scuffing compounds. Clean-up is quick and easy — simply wipe off the blend area with a 3M Perfect-It Detailing Cloth.

### Scuff Pad Sanding

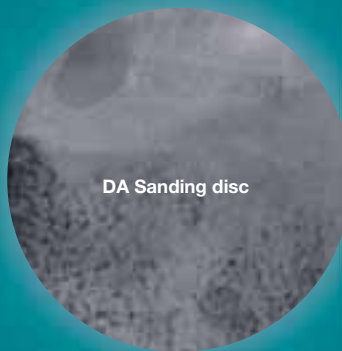

Scuff pads conform to the surface but do not remove glossy spots.

**Result:** Deep or wild scratches show through metallic colors.

### Traditional DA or Wet Sanding

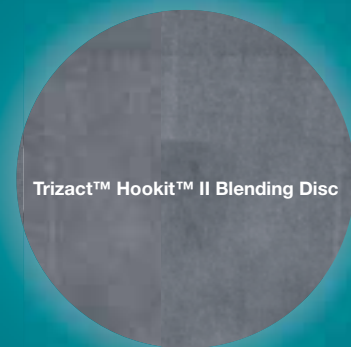

DA Sanding Discs don't conform, sanding off the tops of the orange peel and through to base coat.

**Result:** Shiny, glossy spots, with risk of burn-through.

### Trizact Damp Sanding

Trizact™ foam disc conforms and sands deep into orange peel.

**Result:** Consistent, matte finish with no shiny spots or burn through.

# Product Built Exclusively for Prepping Panels

## Advanced Technology Creates a Premium Finish

3M Trizact Abrasives are uniquely constructed to help auto body technicians quickly prepare entire panels for blending.

### 3M™ Trizact™ Abrasives

Trizact abrasives' unique pyramid-shaped structures contain multiple layers of abrasive mineral. As the abrasive wears, fresh, sharp abrasive is continuously exposed. The result is a consistent finish, faster and superior to anything previously achieved.

### Conventional Abrasives

Conventional abrasives, by contrast, have randomly arranged minerals, and wear unevenly.

## The Power of Precision

**Consistent finish... Faster and superior to conventional abrasives**

### Uniform Paintable Pattern

- Metallic paints lay down more uniformly
- Scratches don't show through clear coat

### Dense Scratch Pattern

- Matte finish remains without removing orange-peel
- No shiny spots!

### Precise control

- Sand entire panels without fear of burn-through
- Clear coat remains intact on edges, bodylines and contours

### Single-product versatility

- Sand large panels, replacing many traditional blending methods
- Disc conforms to contours for scuff sanding hard-to-reach areas and edges

### Increased customer satisfaction

- Flawless texture match
- Invisible blend lines
- Excellent paint adhesion - no clear coat peel

# The Process of Precision

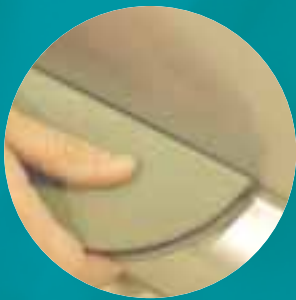

## STEP 1 SANDING Large Areas

**1a. CLEAN** the repair area with soap and water, followed by 3M™ General Purpose Adhesive Cleaner,.

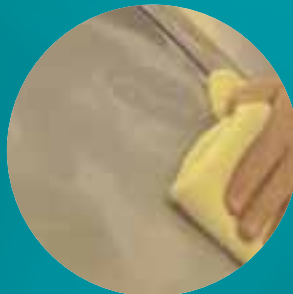

**1b.** Using a spray bottle, apply enough water to dampen the 3M™ Trizact™ Hookit™ II Blending Disc before sanding the panel. **DAMP SAND** the entire blend area, including bodylines and edges, with a DA sander. When necessary, re-dampen disc with water from spray bottle while sanding.

## STEP 2 SANDING Hard-to-reach areas

**2a.** Remove Blending Disc from backup pad to sand hard-to-reach areas and edges.

## STEP 3 CLEANING

**3a.** Wipe off blend area immediately.

**Don't forget to use  
3M™ Trizact™ P3000  
for all your paint finishing needs.**

**Consistent finish... Faster and superior to conventional abrasives**
